EUROTHERM®

RINGS

Each Eurotherm Ring is made from EURO THERM TMT BAR and is far superior in terms of quality and creation process. Strict quality controls are used to ensure consistency, quality & accurate dimensions. They are available in most commonly used sizes and meet all the Indian government norms like: IS 456, IS 2502, SP-34, IS 13920 (Indian Ductile Details Code).

ADVANTAGES

- As per BIS specification like BIS 2502/458
- Zero defect rings without any cracks, bends or any other deformation
- No time is wasted for making the rings
- No wastage of material due to ends and cracks
- Strict quality control parameters are maintained
- Exact 135° bend provides good seismic resistance to the reinforcement
- Ease of availability
- Stocked at distributor's end to meet urgent demand

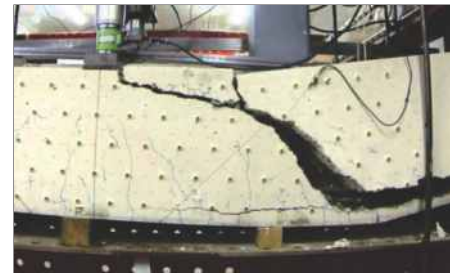

READILY AVAILABLE SIZES

7mm - 7"x4", 7"x7", 7"x10"
 8mm - 7"x4", 7"x7", 7"x10", 7"x12"
 Any other size can be supplied on request

IMPORTANCE OF RINGS

- Rings bind and hold bars of steel in position.
- Prevents the buckling or spreading out of TMT bars.
- Prevents concrete from splitting outwards.
- To prevent shear stress in TMT bars.
- To prevent the columns from cracks.
- Problems in beams with use of incorrect/ inaccurate rings.

WHAT CAN GO WRONG? STEEL BEAMS
